There needs to be parity if not the same component used for changing and creating a project. If not personas exist yet, gray out the field. If no Nords exist - gray out the field. The project settings are more mature we need an icon and color selector for the projects.

On the project selection screen make the icons 2x larger and the selected project color. Make sure the project settings (...) can be accessed via the ... button as well.

Hide Mutable option. Add a Deterministic option called Enable Goals - this will activate the goals system.

ADMIN SECTION

Create a feature-flag to hide the admin items for now.
